Online Workshop on "Data Science & Face Detection" 2020

On 24th May 2020, Sunday. Coding Blocks collaborated with Department of Computer Science & Applications, Panjab University to host a three hour online workshop on 'Data Science & Face Recognition'. The session was conducted by Mr. Mohit Uniyal, Coding Blocks.

About the event:

Online workshop dated 24th May 2020 with mentor Mr. Mohit Uniyal was centred on the Data Science & Face *Recognition*. In total 122 students from the department attended the online workshop.

It was a very informative session for all the data science enthusiasts. Both first year and second year students of MCA and M.Sc. attended the workshop. The workshop was live for three hours.

The Mentor started with defining data science, machine learning and python, and their interconnection along with practical application areas with real life examples. Thus, even a beginner with no prerequisite knowledge has benefited from the workshop. He also explained some theoretical concepts of Machine Learning(ML) like types and scope of problems that could be addressed by algorithms developed for ML.

After giving some practical examples of the same he implemented basic codes of python ranging from control flow, iteration to important python libraries like numpy, matplotlib etc. covering some important functions contained in these libraries on Jupyter IDE. The webinar consisted of coding a mini face detection project using python in the last 30 minutes. Thus, all functions, libraries, packages, problem solving constructs used were explained by the mentor beforehand.

Links to resources used and the code he developed were shared. Also, a face detection system was developed that was able to detect the faces in a photograph distinctively. The workshop was conducted exquisitely and the students gained a good amount of knowledge from it.

Student queries were addressed during the workshop as well as at the end. Conclusively it can be said that it was a fruitful session for all beginners in python development as well as programmers implementing ML algorithms.
