Expert Talk by Dr. Anuj Sharma

On September 24, 2025, an engaging and thought-provoking session by Dr. Anuj Sharma took place at the Mahatma Gandhi State Institute of Public Administration (MGSIPA), Chandigarh. The event drew students, faculty members, and professionals, all eager to learn more about the rapidly changing digital world we live in today.

From the very start, Dr. Sharma connected effortlessly with the audience. His talk was filled with real-life examples and relatable situations that made everyone reflect on how technology impacts their everyday lives. He spoke about the growing importance of staying aware and cautious while navigating online spaces, encouraging participants to think critically about their digital habits and how small actions can make a big difference in ensuring safety and privacy.

The session became even more lively during the interactive segment. Attendees asked questions about real-world challenges—how to protect personal data, avoid digital scams, and stay safe on social media. Dr. Sharma patiently answered each question, sharing practical tips and simple yet effective ways to stay secure online. His responses were not only informative but also reassuring, making the session feel like an open conversation rather than a lecture.

By the end of the session, the participants left with more than just information—they left with awareness, curiosity, and a renewed sense of responsibility toward being safe and mindful in the digital world. The talk succeeded in sparking genuine interest and conversation, leaving everyone inspired to be smarter, safer, and more confident digital citizens.

Expert Lectures Delivered by Dr. Rohini Sharma at GNDU, Amritsar

Demonstrating the department's ongoing commitment to academic collaboration and knowledge sharing, Dr. Rohini Sharma was invited as a resource person for the Short Term Course on "Digital Citizenship and Cyber Security" (Multidisciplinary) held at Guru Nanak Dev University, Amritsar, from October 22 to October 28, 2025.

On October 24, 2025, she delivered two insightful sessions on the following crucial areas of cyber security:

1. Cyber Attacks
2. Anomaly Detection in Networks

The lectures provided participants with an in-depth understanding of cyber threats, attack mechanisms, intrusion patterns, and modern approaches to identifying anomalies in network behavior. Dr. Sharma's insightful explanations and practical perspectives were highly appreciated by the attendees, contributing meaningfully to the course's academic objectives.

-Arsh Divya (MCA-II [M])

Expert Session on Semantic Analysis Held During SEC on Machine Learning Using Python

As part of the Skill Enhancement Course (SEC) on "Machine Learning using Python," organized by the Department of Statistics from October 27 - October 31, 2025, our faculty Dr. Jasleen Kaur Bains delivered an expert lecture on "Preprocessing Text and Implementation in Semantic Analysis" on October 28, 2025.

The session was attended by Master's and Ph.D. students of the department. Dr. Bains delivered an insightful and engaging talk, covering essential concepts of semantic analysis, text preprocessing techniques, and practical implementation using Python. The participants appreciated the clarity of explanations and the hands-on orientation of the session.

The programme coordinators, Dr. Anju Goyal and Mr. Harminder Singh Deosi, expressed gratitude to the expert for contributing to the Skill Enhancement Course and for enriching the learning experience of the students.

-Arsh Divya (MCA-II [M])

Expert Lecture on Machine Learning by Dr. Supreet Thapar at SEC

The Department of Statistics, Panjab University, Chandigarh organized a Skill Enhancement Course (SEC) on "Machine Learning using Python". As part of this academic initiative, Dr. Supreet Thapar was invited as a distinguished guest speaker to share her expertise. She delivered an enriching session on October 29, 2025 on "Clustering Techniques in Machine Learning using Python" at the Department of Statistics.

Her lecture provided participants with a clear understanding of clustering algorithms, their underlying intuition, and practical implementation through Python, making complex concepts approachable and relevant. The session was highly appreciated for its depth, clarity, and hands-on perspective.

Dr. Thapar's contribution not only elevated the academic value of the programme but also showcased the active engagement and scholarly strength of our department.

-Ishneet kaur (MCA-II [M])

Expert Session by Dr. Rohini Sharma on Modern Approaches in Unsupervised Learning

Dr. Rohini Sharma delivered an expert lecture on October 29, 2025, on the topic "Unsupervised Learning Techniques" as part of the Skill Enhancement Course on "Machine Learning Using Python," organized by the Department of Statistics from October 27 - October 31, 2025.

In her session, she introduced participants to the core principles of unsupervised learning and emphasized its rising importance in modern data-driven research. She explained key concepts such as clustering methods, dimensionality reduction techniques, pattern discovery, and anomaly detection, illustrating how these approaches are applied to real-world datasets.

The lecture was highly interactive, with participants actively engaging in discussions on current trends, practical challenges, and the broader applications of machine learning. The session was well appreciated for its clarity, strong conceptual coverage, and effective linkage between theory and implementation.

DCSA Celebrates Ishneet Kaur's Artistic Achievements

The Department proudly acknowledges the remarkable achievements of Ishneet Kaur, a talented student of (MCA-II [M]), whose artistic excellence has brought great recognition to the department and Panjab University. Ishneet secured the First Position in the Rangoli competition organized by the Department of Youth Welfare during the Viksit Bharat event, where her exceptional Rangoli design was further honored by being selected for the front page of the Youth Festival and Heritage 2025 Rule Book, a publication circulated across numerous Punjab colleges affiliated with Panjab University. Adding to her accomplishments, she represented the Panjab University Campus in the Youth Festival 2025, held at SD College, Sector 32, Chandigarh, achieving the Third Prize in the highly competitive Rangoli category and showcasing her creativity on a prominent intercollegiate platform.

On October 27, 2025, Ishneet kaur was invited to design a thematic Rangoli at the Department of Physics, Panjab University, during the prestigious 2nd International Conference on Advances in Condensed and Nano Materials (ICACM-2025) October 27, 28–30, 2025. Her artistic contributions extended beyond cultural events when she created a theme-based Rangoli for the ICACM-2025, and organized by the Department of Physics, Panjab University in collaboration with the Anusandhan

National Research Foundation. With distinguished leaders such as Prof. Renu Vig, Hon'ble Vice Chancellor and Chief Patron, and Prof. S. K. Tripathi, Conference Chair, the event witnessed participation from eminent researchers and scientists, and Ishneet's Rangoli added a vibrant cultural dimension to the international gathering.

Furthermore, during the conference, she also placed a feedback form near her Rangoli artwork, inviting visitors to share their impressions. A large number of attendees enthusiastically filled the feedback, offering heartfelt appreciation for her creativity, technique, and thematic representation. The reviews were overwhelmingly positive, praising her for the intricacy, beauty, and relevance of the design to the conference theme. These encouraging responses not only highlight the impact of her artistic talent but also reflect her ability to engage and inspire people through her work. The department proudly celebrates her contributions, which have significantly enhanced the institution's cultural and academic prestige.

-Arsh Divya (MCA-II [M])

VetTrack AI – AI-Powered Pet Health Management System

The Department is proud to highlight the remarkable achievement of Kashish Arora (MCA-I [E]), a talented student from Panjab University, who made a notable mark at AnimalHack 2025 — an international online hackathon organized by Binnovative, New York

AnimalHack 2025 brought together passionate innovators from across the globe to design creative technological solutions promoting animal welfare, adoption, and human–animal interaction.

The hackathon followed a rigorous three-phase process — participants were required to design and develop their projects before the submission deadline of September 6, 2025, submit them via Devpost, and later present their final demonstrations through an online Zoom session held on September 7, 2025.

Among the distinguished entries, the project "VetTrack AI – AI-Powered Pet Health Management System" developed by Kashish Arora in collaboration with Mun Chet (Boston, New York), stood out for its innovation, functionality, and societal impact. It enables pet owners to manage their pets' health efficiently with features like symptom analysis, photo-based diagnosis, and health tracking, along with voice-guided summaries powered by Murf TTS for real-time voice guidance

The project was developed using a robust technology stack that included Flask, SQLAlchemy, SQLite/PostgreSQL for backend, HTML5, CSS, Bootstrap, and Vanilla JavaScript for frontend, and integrated Google Gemini AI for medical diagnosis along with Murf TTS.

Kashish Arora demonstrated exceptional technical proficiency by handling both frontend and backend development, database design, and implementing the AI and voice integration modules. Her collaborative spirit, problem-solving approach, and innovation-oriented mindset were pivotal to the project's success.

The department extends heartfelt congratulations to Kashish Arora for her outstanding contribution and representation at an international platform. Her success at AnimalHack 2025 not only showcases her technical excellence but also reflects the department's commitment to encouraging students to pursue global opportunities, innovate responsibly, and contribute meaningfully to society through technology.

NEP SAARTHI Student Ambassador Program

The NEP SAARTHI Student Ambassador Program is a unique initiative designed to spread awareness about the National Education Policy (NEP) 2020 and to inspire students to take an active role in bringing its vision to life within the academic community. The program seeks to empower students as change-makers who bridge the gap between policy and practice, ensuring that the principles of NEP 2020 —such as holistic learning, innovation, and multidisciplinary education—are understood and implemented effectively across various departments of Panjab University.

From the main campus of Panjab University, a total of ten students were selected as NEP SAARTHI ambassadors after a rigorous selection process. Representing the Department of Computer Science and Applications (DCSA), Mr. Karan Pathania (Research Scholar) and Mr. Daljeet Singh (MCA-I [E]) were among the selected candidates, marking a proud moment for the department. The interviews were conducted on August 29 at the NEP Cell, Panjab University, followed by the announcement of results on September 10.

Since their selection, the ambassadors have been actively engaged in promoting awareness about NEP 2020 through a range of activities including interactive discussions, departmental meetings, awareness sessions, and outreach programs. Their efforts focus on helping students and faculty understand the key objectives of the policy—flexibility in education, skill-based learning, research orientation, and inclusivity.

The initiative has received an overwhelmingly positive response from both faculty and students, who have appreciated the ambassadors' enthusiasm and dedication. Their contributions are gradually creating a culture of awareness, collaboration, and innovation aligned with the core values of NEP 2020. The department extends its heartfelt congratulations to Mr. Karan Pathania and Mr. Daljeet Singh for their commendable achievement and wishes all NEP SAARTHI ambassadors success in their ongoing efforts to make Panjab University a model institution for NEP implementation.

PHD enrollment interviews

On September 30, 2025, the Ph.D. enrollment interviews were successfully conducted as part of the admission process for the upcoming doctoral research program. The interviews were organized and executed by the Research Committee in a systematic, transparent, and professional manner, ensuring fairness throughout the evaluation process.

A total of two candidates, Ram Ashish and Sourav Saini, both MCA graduates from the department (Batch 2024), appeared for the interview. Both candidates have cleared UGC-NET—Ram Ashish in December 2024 and Sourav Saini in June 2025. They demonstrated strong interest in the field of Deep Learning. After being assessed on key parameters such as their proposed research areas, subject knowledge, clarity of research objectives, and potential to make meaningful academic contributions, both candidates were selected.

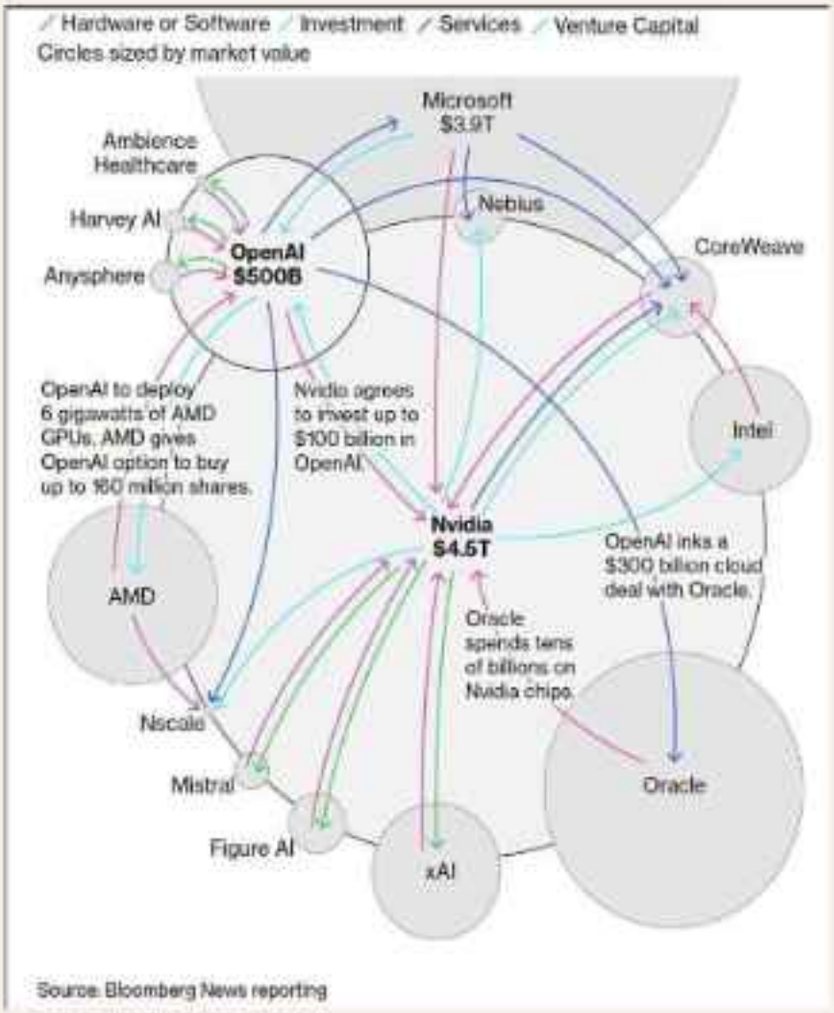

They will begin their research under the guidance of Dr. Anuj Kumar. The process concluded successfully, reaffirming the institution's commitment to academic excellence, research integrity, and the promotion of high-quality scholarly work within its doctoral program.

What is the AI Bubble and Why it Might Burst Soon?

The present state of the Artificial Intelligence (AI) industry resembles the unsettling feeling of a balloon being overly inflated - a widespread sense that an inevitable, catastrophic "BANG" is imminent. The AI boom is widely considered a financial bubble because the technology has been overhyped, often failing to deliver on its promises or to improve significantly beyond its current state. This lack of realized profitability means that the vast sums of capital poured into the industry - hundreds of billions, perhaps trillions - may never generate a return. One of the most concerning indicators of this financial instability is the mechanism of circular financing, reminiscent of tactics used during the dot-com boom of the 1990s. Companies whose valuations are based on high future expectations, rather than current profits, are now investing in each other to perpetually inflate their stock prices. A prime example is the relationship between OpenAI and Nvidia. Nvidia, the dominant AI chipmaker whose products drive the majority AI data centers, is set to make enormous revenue from OpenAI for years to come. Despite OpenAI being "wildly unprofitable" and projected to post annual losses in the hundreds of billions of dollars, Nvidia is planning to invest $100 billion into the company. This $100 billion often takes the form of allowing OpenAI to "lease" essential GPU chips, rather than actual cash. This relationship blurs the line between genuine revenue and strategic investment - real transactions occur, but they primarily serve to boost each company's reported growth and valuation. OpenAI's value soars because of the massive "investment," while the "investment" itself (in the form of chip purchases or leases) boosts Nvidia's reported revenue - sending its already sky-high valuation even higher. OpenAI's valuation alone has jumped from $20 billion in 2022 to $300 billion in 2025.

The spending frenzy is unprecedented. OpenAI, which reports only $12 billion in yearly revenue, has signed a $300 billion deal with Oracle and launched a $500 billion Stargate facility. On the other hand, technological returns are starting to go down. Estimates say that training GPT-3 cost tens of millions of dollars, GPT-4 hundreds of millions, and GPT-5 several billion, with only small improvements between versions. Various studies suggest that AI deployments are generally unprofitable and may even make companies less efficient.

Some experts warn that growth may soon slow because the high-quality human text needed to train large models is running out, likening AI data to a "fossil fuel" supply. Critically, recent analyses suggest the AI bubble is far larger and more interconnected than previously believed. Analyst Julien Garran estimates the current AI bubble to be 17 times the size of the dot-com bubble and four times larger than the 2008 housing bubble at its peak. The looming collapse is now viewed as a game of chicken among major investors. As soon as a key player decides the risk is too high and begins to sell off, a landslide could be triggered. While technological innovation in AI is undoubtedly revolutionary, the financial story surrounding it is far shakier. History suggests that when the music stops, the underlying technology will endure—but the inflated valuations and many of the companies built on them will not.
