Workshop on "DEEP LEARNING MODELS AND CHALLENGES" 2020

On 29nd May 2020, Friday. The workshop was delivered Prof. R.K. Agrawal, Dean Engineering, JNU, New Delhi with association with Department of Computer Science & Applications, Panjab University.

This seminar was organised by

- Professor R.K Singla, DUI, Panjab university
- Mrs. Jasleen Kaur, Chairperson DCSA, Panjab university

About the event:

Online webinar dated 29 May 2020 with mentorProf. R.K. Agrawal, Dean Engineering, JNU, New Delhi delivered a talk on the "Deep learning models and challenges". In total 92 students from the department attended the online workshop.
Prof. R.K. Agrawal explained every topic in the best and easiest way with the help of real daily life examples in his presentation. Topics like deep learning, single layer and multi-layer perceptron, convolutional neural networks, autoencoders, and challenges to deep learning etc. were explained diagrammatically which made it easy to understand. The topics covered included:

- Single Layer Perceptron
- Multilayer Perceptron
- Handwritten Character Recognition
- Pooling(Max Pooling)
- Convolutional Neural Network(CNN)
- Edge Operators
- Challenges

The webinar also covered Handwritten Character Recognition, which was very interesting and covered all steps taken explaining how a computer can be used to recognize patterns like numbers, alphabets etc. through their strokes, rings and shapes.

Prof. R.K. Agrawal also made difficult things look easier by explaining their implementation using Python programming language to all the attendees using a variety of test cases and cleared all sorts of doubts raised by the students and the faculty of the department.

To sum up, the webinar was a really informative one and we look forward for more such useful and knowledgeable webinars in the field of computers and technology required currently in the society.

Professor R.K Agrawal also mentioned some of the challenges associated with deep learningsuch as the need of huge amount of data, expensive and intensive training and etc. Certainly, atthe end Professor explained its daily implications and the way ahead.
