Webinar Report

National Educational Policy 2020: Introducing Coding at young age

September 25th, 2020 was marked as another informative day as a webinar was organized on '**National Education Policy 2020 : Introducing Coding at young age**' by Department of Computer Science and Applications, Panjab University Chandigarh and Vidya Bharti.

The webinar marked the presence of eminent personalities like Sh. Vijay Nadda, Organising Secretary North-India, Vidya Bharti (Chief Guest), Prof Raj Kumar, Hon'ble Vice-Chancellor Panjab University Chandigarh (Chief Patron) and Prof Sanjeev K. Sofat, CSE, PEC, Chandigarh (Speaker). The event was coordinated by Dr. Rohini Sharma, Chairperson (Officiating), DCSA, Panjab University, Chandigarh and was attended by teachers, research scholars, school Principals and students.

About the webinar:

The webinar began with the welcome address by Dr. Rohini Sharma where she discussed that coding is a basic literacy in this digital age and this idea of introducing coding at young age can be achieved by joint efforts of all the stakeholders. Prof Raj Kumar, Hon'ble Vice-Chancellor Panjab University Chandigarh, gave an enlightening speech where he shed light upon the significance of learning to code at an early age to help in self-growth as well as of the society and make the dream of our Prime Minister Narendra Modi's Atma Nirbhar Bharat a success.

Further in the webinar, Sh. Vijay Nadda, Organising Secretary North-India, Vidya Bharti, our Chief Guest, shared his enlightening words about the new 'Shiksha Neeti' and how it marks an important step by the government to help brighten the future of the nation. He also mentioned the role of a good teacher in shaping the student's future, as it is the teacher whose hand the student holds in his journey to success.

Further Prof. Sanjeev Sofat talked about the National Education Policy 2020 in brief and how the changes and the new schemes added by the Government in the Education Policy helps to enhance the educational quality. The key note of the policy is that the Government decided to introduce coding to students at a young age. They will start doing and learning the concept of coding from 6th Grade which will work as a boon for the students who like to work in fields like Artificial Intelligence and Robotics in future.

After that he explained how this decision is beneficial to every individual and specially to kids. He talked about the following advantages:
i). Coding helps in problem solving and it will increase the learning capacity to understand the concepts in a better way.
ii). Kids learn how things work in the real world at an early age.
iii). This will lead to algorithmic and structural thinking in kids, that is, they will get the ability to define clear steps to solve a problem and how problems can be solved efficiently by dividing it into smaller modules.
iv). Students will learn perseverance, that is, doing something despite difficulty or delay in work.
v). Coding concepts produce a habit of curiosity and will push the students to ask questions.
vi). Students will learn to observe and analyze things in a better way.
vii). Coding shows mathematics in action and helps them to learn in a broader way.

Despite so many benefits of introducing coding to kids, there are some challenges as well to implement it in a perfect way.

Some of the major Challenges which can be faced are as follows:

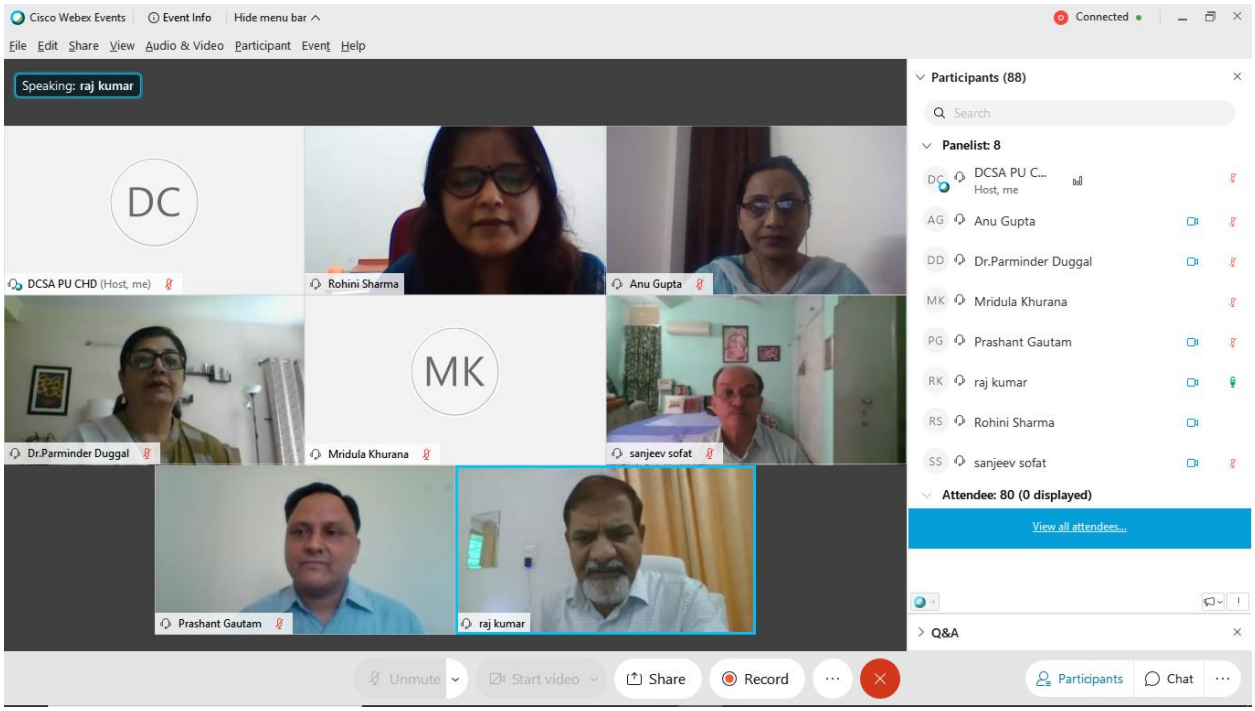

i). Lack of Infrastructure : In India, the ratio of children to computers is low which will lead to difficulty for the students. Also, the Internet connectivity is a major issue as it is difficult for the students to access the Internet who live in villages and small towns.

ii). Quality Teachers : Coding is a conceptual and practical subject so it's the need of the hour that it should be taught by those who know about it and who can explain it in such a way that students will not get scared at first. Younger teacher can get it easily as they have the better ability to go through it.

At last, our speaker Prof. Sanjeev Sofat concluded that this new policy can prove to be helpful if we overcome the challenges and it will lead to a bright future for the students.

Finally, Dr. Parminder Duggal, Principal, Ankur School, Chandigarh, expressed her views on the topic. She highlighted the importance of learning to code as it improves confidence and helps students to think out of the box. She found coding so important that she wanted to give it a try herself.

To sum up, the webinar was really an informative one and helped equip everyone with the benefits and need of learning to code from a very young age.

'Learning coding at young age' discussed at Webinar by PU Computer Science

by our Reporter

Chandigarh: A webinar on 'National Education Policy 2020: Introducing coding at young age' was organized by the Department of Computer Science and Applications, Panjab University and Vidya Bharti today.

The webinar started with the welcome address by Dr Rohini Sharma, Chairperson where she discussed that Coding is a basic literacy in this digital age and this idea of introducing coding at young age can be achieved by joint efforts of all the stakeholders.

Panjab University Vice-Chancellor Prof. Raj Kumar, in his address stressed upon the collaborative efforts of various stakeholders to implement the ideas proposed in NEP.

He added that reforms will open many doors of opportunities not only for students but also for the country as a whole to become a global knowledge superpower.

It will change the perception of the Indian education system from the school level onwards by allowing every student to pursue their interests and excel in the field they desire.

The Panjab University VC opined that introducing coding and increasing exposure to technology at a young age will go a long way in helping future generations lead the way to a new world of innovation and creativity, thus, giving children the opportunity to set their own goals and reach new heights debarred of old teaching systems to pull them down.

The secret of success for a student lies in making the best use of his capability and capacity to think.

Previously, the student used to think through the mind of the teacher and follow their thought process.

Coding helps to blossom every single unit of the child's brain whether being logical thinking or through art integration, mechanics, or analytical thinking.

It enables children to enter the world of new-age technology by giving them an arena to develop apps and games or work in the field of robotics and artificial intelligence.

Vijay Nadda, Organizing Secretary North Zone, Vidya Bharti was the Chief Guest who talked on the role of a good teacher in shaping the future of students, as it is the teacher whose hand the student holds in his journey to success.

He shared his thoughts on the new 'Shiksha Neeti' and how it marks an important step by the government to help brighten the future of the nation.

The Keynote Speaker, Prof. Sanjeev Sofat from PEC, Chandigarh talked on the benefits of learning coding at a young age like development of analytical and computational thinking and problem solving skills.

It will lead to algorithmic and structural thinking in kids, that is, they will get the ability to define clear steps to solve a problem and learn how problems can be divided into smaller modules for efficient solutions. Coding concepts inculcate the habit of curiosity and will push the students to ask questions.

Dr. Parminder Duggal, Principal Ankur School also expressed her views on the topic and Prof. Anu Gupta concluded the webinar by proposing a vote of thanks.

The webinar concluded on a positive note that introducing coding in schools will bring positive change in the way kids think about problems.

पीयू कंप्यूटर साइंस द्वारा आयोजित वेबिनार में यंग एज में लर्निंग कोडिंग के फायदों पर हुई चर्चा

स्यूमन इंडिया/विनोद कुमार

चंडीगढ़: राष्ट्रीय शिक्षा नीति 2020: कम उम्र में कोडिंग का परिचय 'पर एक वेबिनार का आयोजन आज कंप्यूटर विज्ञान और अनुप्रयोग विभाग, पंजाब विश्वविद्यालय और विद्या भारती द्वारा किया गया। वेबिनार की शुरुआत चेयरपर्सन डॉ. रोहिणी शर्मा के स्वागत भाषण से हुई, जिसमें उन्होंने चर्चा की कि इस डिजिटल युग में कोडिंग एक बुनियादी साक्षरता है और कम उम्र में कोडिंग शुरू करने का यह विचार सभी हितधारकों के संयुक्त प्रयासों से प्राप्त किया जा सकता है। पीयू के कुलपति प्रो राज कुमार ने अपने संबोधन में विभिन्न हितधारकों के सहयोगात्मक प्रयासों पर एनईपी में प्रस्तावित विचारों को लागू करने पर जोर दिया। उन्होंने कहा कि सुधार न केवल छात्रों के लिए बल्कि देश के लिए वैश्विक ज्ञान महाशक्ति बनने के अवसरों के मौके पैदा करेंगे। यह स्कूली स्तर से भारतीय शिक्षा प्रणाली की धारणा को बदल देगा और प्रत्येक छात्र को उनके हितों को आगे बढ़ाने और उनकी इच्छा के क्षेत्र में उत्कृष्टता प्राप्त करने की अनुमति देगा।

पीयू वीसी ने कहा कि कम उम्र में प्रौद्योगिकी के लिए कोडिंग और बढ़ती एक्सपोजर का परिचय भविष्य की पीढ़ियों को नवाचार और रचनात्मकता की एक नई दुनिया की ओर ले जाने में एक लंबा रास्ता तय करेगा। इस प्रकार, बच्चों को अपने स्वयं के लक्ष्य निर्धारित करने और नए तक पहुंचने का अवसर मिलता है। एक छात्र के लिए सफलता का रहस्य उसकी क्षमता और सोचने की क्षमता का सबसे अच्छा उपयोग करने में निहित है। पहले छात्र शिक्षक के दिमाग के माध्यम से सोचते थे और उनकी विचार प्रक्रिया का पालन करते थे। कोडिंग से बच्चे के मस्तिष्क को हर एक इकाई को खिलने में मदद मिलती है, चाहे वह तार्किक सोच हो या कला एकीकरण, खाँकी या विश्लेषणात्मक सोच। यह बच्चों को ऐप और गेम विकसित करने और रोबोटिक्स और आर्टिफिशियल इंटेलिजेंस के क्षेत्र में काम करने के लिए नई-नई तकनीक की दुनिया में प्रवेश करने में सक्षम बनाता है।
