WEBINAR ON ARTIFICIAL NEURAL NETWORK

On 27th May 2020, a webinar was delivered by Prof. R. K. Agrawal, Dean and Professor, School of Engineering; Professor, School of Computer and Systems Sciences, JNU in association with Department of Computer Science and Applications, Panjab University.

About the event:

A webinar dated 27th May 2020 was organised by the Prof. R.K. Singla, DUI Panjab University and Mrs. Jasleen Kaur, Chairperson, DCSA, PU along with technical team of our department. The topic of webinar was "Artificial Neural Network". In total 107 participants attended the webinar. They included students, research scholars, faculty of department and few faculty of various other Panjab university departments and affiliated colleges.

The focus of the webinar was to give a good idea about the important concepts related to Artificial Neural Network. The event started from the basics of Machine Learning i.e., how machine learning works, some basics examples in daily life of ML, goal of Machine learning followed by the brief overview of Artificial Intelligence with Machine Learning.

The topics covered under the webinar are:

1. **Typical goals of machine learning:** Acquisition of new (symbolic) knowledge, Refinement and organization of knowledge into more effective representations or more useful form.
2. **Implementation of machine learning:**
3. **Supervised learning:** It is the machine learning task of learning a function that maps an input to an output based on example input-output pairs. It infers a function from labelled training data consisting of a set of training examples.
4. **KNN algorithm:** A k-nearest-neighbour algorithm, often abbreviated k-nn, is an approach to data classification that estimates how likely a data point is to be a member of one group or the other depending on what group the data points nearest to it are in.
5. **Basics of neural network for Single perceptron**
6. **Multilayer perceptron:** A multilayer perceptron (MLP) is a class of feedforward artificial neural network (ANN). The term MLP is used ambiguously, sometimes loosely to refer to any feedforward ANN, sometimes strictly to refer to networks composed of multiple layers of perceptron's.

The overall session helped the students get insights about Machine Learning, Basics of Artificial Neural Network, examples and Implementation of the same topics through MATLAB. The session was insightful and students gained various knowledge about the same.
