Online Session held on JAVA Programming

On April 23rd 2020, Thursday, A Java learning session from Great Learnings in association with the Department of Computer Science & Applications, Panjab University was conducted. The speaker was Mr. Bharani Akella, Data Scientist.

About the live session:

The live session was enlightened by Mr. Bharani Akella and 92 students from the department participated. The goal of the session was to give a glimpse of the programming language and create a base for the students for programming.

Today's live session for the topic " Introduction to Java" mainly focus on the basics of java. The speaker explained about the following:

1. The characteristics of Java and how it is different from other programming languages.

2. For programming in Java, PC must have a JDK kit and an IDE (for eg. ecllipse) and how to download it so that it can be used for programming.

3. Basic Java programs (eg. Using streams for printing, using operators), the meaning of various reserve words like public, static, main etc.

4. How to define Boolean data type (true or false).

5. Various condition control structure and Iterative statement in java with the help of basic program. In the end, Speaker of the session drops a 4 hours long video in his channel which consist of all basics of java programming language.

The first day of this session was pretty amazing. It was really a nice and interactive session. Each and every topic was explained very well along with their practical implementation. There was no overlapping of information and everything was concise and clear. The session was for beginners as it covers the basic topics only but someone who knows Java can revise all the previous topics clearly.

The live session was fruitful and explained basic topics completely which is very essential for building the base for the programming knowledge. The material shared by the instructor was also sufficient and of good quality.
