Name of Department: Computer Science and Applications

Name of Programme: Ph.D.

Vision

The department aims at ingraining the spirit of ingenuity, innovativeness and technical competence in the students through rigorous competition and regular guidance.

Mission

To enhance the knowledge base of the students and empower them with skill sets relevant to the industry, academia and research.

Programme Outcomes (PO)

PO 1. To know the role and importance of research in the real life use.

PO 2. This include identifying the issues and concepts salient to the research process, mainly, selecting a research problem, selecting an appropriate research design, and implementing the research process.

PO 3. The course helps in understanding of concepts and procedures of data handling, reports, research ethics and publications of findings

Programme Specific Outcomes (PSO)

PSO 1. To know the role and importance of research in the real life use.

PSO 2. This include identifying the issues and concepts salient to the research process, mainly, selecting a research problem, selecting an appropriate research design, and implementing the research process.

PSO 3. The course helps in understanding of concepts and procedures of data handling, reports, research ethics and publications of findings

Course Outcomes

M.Sc. First Semester		
Paper Code: CSA 101	Paper Title: Research Methodology	To equip research students with knowledge of research publications and ethics. The systematic understanding of carrying research during PhD tenure and importance of research problem. This enable PhD students to gain knowledge of intellectual property rights and quality publication. The research designs related to Computer Science for real life use are part of this course
Paper	Paper Title: *Research*	This course enable PhD students to prepare

Code: CSA 102	*Seminar*	presentation skills including various presentation tools. This further add skills of presenting research problem with understanding of problem background, state-of-the-art of research problem and future scope. The seminar preparation equip PhD students to gain confidence of carrying research and necessary skills to present their research work.
Paper Code: CSA 103	Paper Title: *Elective subject*	The elective subjects are subject to area of interest of PhD students. This enable PhD students to learn necessary fundamentals of respective areas and experimentation skills for the same. The course offer important techniques and methods of research area that helps PhD students to gain fundamental concepts.
